DETAILED ACTION

Election/Restrictions

1. Claims 4, 17 and 18 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 10/16/2006.

Claim Objections

1. Claim 20 is objected to because of the following informalities: The claim depends on withdrawn claims 17 and 18 in the application. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-3, 5-12, 14-16, and 25-26 are rejected under 35 U.S.C. 102(b) as being anticipated by Kaplan (U.S. Pat. No. 5342348).

Kaplan discloses a stent having a plurality of openings and an elongated polymer strand (16,14) woven longitudinally through the openings (fig. 2A). Examiner is interpreting the outer boundary of stent (2) to be a thin wall. Kaplan discloses that this strand is made of biodegradable polymer, for example poly(L-lactic acid) (col. 6 lines

Art Unit: 3738

52-64). Kaplan also discloses an alternate polymer strand that is non-degradable, for example, strands made of ethylene-vinyl acetate copolymers (col. 7 lines 42-52). Kaplan does disclose the use of a biomolecule such as a starch, col. 7, lines 53-58. Kaplan further discloses a stent crimped onto a balloon (see fig. 6A and 6B). With respect to claims 14-16, Kaplan discloses methods of providing a therapeutic agent into a vessel lumen by implanting a stent with a woven polymer strand that has at least one therapeutic agent incorporated on it (see col. 10 lines 40-65). With respect to claim 25 and 26, it can be construed that Kaplan's strands form a sheath over a **portion** of the external surface of the stent and is can be an extruded polymer, col. 11, lines 58-61.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kaplan (U.S. Pat. No. 5342348) in view of Chouinard (U.S. Pat. No. 6156064).

 Kaplan is explained above. However Kaplan does not disclose the stent is a self-expanding stent. Chouinard teaches the use of a self-expanding stent with filaments made of cellulose or collagen (see abstract and col. 8 lines 32-37). It would have been obvious to one of ordinary skill in the art to modify the stent of Kaplan according to the

Application/Control Number: 10/749,186

Art Unit: 3738

teaching of Chouinard to form it as a self-expanding stent, since self-expanding stents have smaller delivery profiles.

6. Claims 19-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kaplan (U.S. Pat. No. 5342348) in view of Mollison (U.S. Pat. No. 6015815).

Kaplan discloses same as above, including antibiotic coated strands (col. 7-8 lines 53-3). However Kaplan does not disclose this antibiotic being a tetrazole containing immunosuppressant macrolide antibiotic. Mollison teaches the use of macrolide immunomodulators containing tetrazole for the purpose of treating restenosis. It would have been obvious to one of ordinary skill in the art to modify the strands of Kaplan to include a tetrazole containing immunosuppressant macrolide antibiotic as taught by Mollison in order to treat restenosis. With regard to claim 20, Kaplan discloses a biodegradable polymer (col. 6 lines 52-64). Since claim 21 and 22 depend from a Markush grouping (claim 20), and the limitations of the Markush grouping have been met, claim 21 and 22 have not been further treated on the merits.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Suba Ganesan whose telephone number is 571-272-3243. The examiner can normally be reached on M-F 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Corrine McDermott can be reached on 571-272-4754. The fax phone
